

The Pterosaur Database

Tapejara wellnhofrei

A single skull (25cm long) with a jaw similar to that of a bird, also showing clear bony crests.

Described by A.W.A. Kellner in 1990. The picture below is of a reconstruction of the skull.

Kellner A. W. A. and Campos D. de A., **1990**, Preliminary description of an unusual pterosaur skull of the Lower Cretaceous from the Araripe Basin. Atas I. Simp. sobre a Bacia do Araripe e Bacias Interiores do Nordeste, pp. 401–405.

Wellnhofer P. and Kellner A. W. A., **1991**, The skull of *Tapejara wellnhoferi* Kellner (Reptilia: Pterosauria) from the Lower Cretaceous Santana Formation of the Araripe Basin, Northeastern Brazil. Mitt. Bayer. Staatsslg. Paläont. hist. Geol. 31, 89–106.
