

The Pterosaur Database

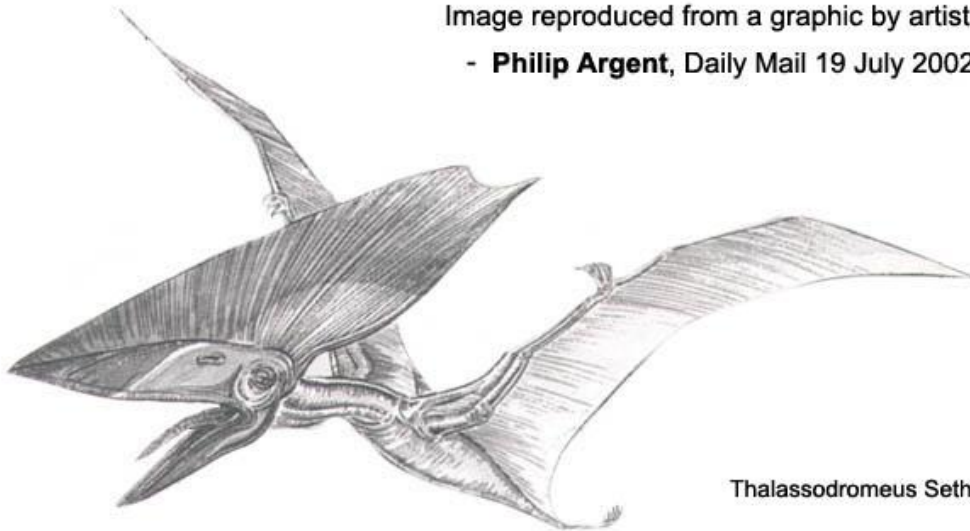

Thalassodromeus sethi

Pterosaur described by A.W.A. Kellner and D. A. Campos in 2002. Skull length 1420mm, including crest which was irrigated with blood. The structure of the rostrum of the jaw suggests a water skimming feeding style. The fossil came from near Santan do Cariri in North East Brazil and it is dated to about 110 MA. Possible 11m wingspan.
