

Dendrorhynchoides curvidentatus

Collected from the Chaomidianzi Formation, Zhangjigou locality from the Lower Yixian Formation near Beipiao City, Western Liaoning Province, China. Tithonian in age, Skull length 3 cm, wingspan 48 cm. Yin and Zeng described this species as a rhamphorhynchoid in 1995. Ji and Ji recognised it as an Anurognathid in 1998. This was later confirmed when a fossil preparator admitted to doctoring the fossil.

Holotype: GMV 2128 (Ji S. and Ji Q. 1998)
